The quick brown fox jumps over the lazy dog now.
The quick brown fox jumps over the lazy dog now and again. A newline in a string counts as a space.

< >

This is a very long heading at a smaller type size. We want to see if it gets correctly split up into a justified paragraph. PMW is supposed to do this, splitting at a space character and stretching all but the last line of the paragraph.

This is a very long heading at a smaller type size. We want to see if it gets correctly split up into a justified paragraph. PMW is supposed to do this, splitting at a space character and stretching all but the last line of the paragraph.

OK, we are back in an untransformed font now. This should be similar to the heading of the last but one paragraph.
The quick brown fox jumps over the lazy dog now and again. And sometimes even more frequently than that.

< >

This is a very long footing paragraph, to check that it gets split up as it should be. Is this long enough?

The *quick, justified, italic brown fox* jumps over the lazy dog for a crotchet   and other things again and again and again. Hey, you do need quite a lot of text to fill up the lines.

This is a last footing; it should be split and justified like the other footings that are sufficiently long. Make sure this one is long enough!
