OK, this is a test footnote. It should be printed at the bottom of the first page, suitably placed between the final system on the page and the footing lines. The positioning is something which we will have to take care to get right.

This is a second footnote, also for the first page. We want to see how the spacing and positioning of this works out.

This is a third footnote, also for the first page. We want to try to force the number of systems on the page to be reduced because of the great number of footnotes that are present in this particularly silly example.

This footnote is with bar 9, which is the bar that gets pushed over onto the next page. See if we can make it long enough to push bar 19 over onto page three. Hmm. It will have to be quite long in order to do that. Here are a few more sentences that might just do the trick if we are lucky.

This is the first footnote of a new movement.

This footnote is with the last bar of the movement.

Should be a bigger gap above this one, and a line below.
